Backend Engineer with 3 years of experience building and owning production-grade distributed systems at DevRev. Known for end-to-end ownership — from architecture and security to cross-team collaboration and incident response. Passionate about building reliable, scalable backend systems and driving impact beyond just writing code.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

GITAM School of Technology, Bengaluru

CGPA: 8.7

2019-23

EXPERIENCE

• DevRev Cloud India Pvt Ltd

Sept 2023 - April 2026

Member of Technical Staff / Backend Engineer

Onsite - Chennai/Bengaluru, India

– Keyring Microservice — Full Ownership:

- Designed, built, and owned the keyring management microservice (Go, MongoDB, AWS, Kafka, Redis) for secure credential storage across 10k+ users
- Architected modular support for OAuth, PAT, and Basic Auth, reducing code redundancy by 40%.
- Implemented KEK/DEK encryption, ensuring secure encryption, decryption, and storage of customer data.
- Implemented periodic token validation with automated keyring state management (active/error), customer notifications, and proactive token rotation to keep all connections active at all times.
- Owned end-to-end keyring sharing across users, including full UI ownership as a backend engineer.
- Designed and deployed cross-region clustering (us-east, ap-south, eu-central) using Kafka for real-time credential sync with RBAC-enforced access controls, reducing cross-region latency by 50ms and ensuring 100% token availability for uninterrupted automation workflows.
- Served as the primary point of contact for all external integrations within DevRev, managing and maintaining OAuth apps across all third-party systems.
- Maintained service performance at 250–400K calls/minute, scaling memory up to 1GB to ensure consistent uptime and reliability.
- Authored comprehensive internal playbooks and guides covering keyring FAQs, debugging workflows, and step-by-step integration guides for adding new OAuth, PAT, Basic Auth, and custom connection types — reducing onboarding and troubleshooting time across teams.

– **Architecture & cross team Collaboration:** Owned and drove architectural designs for keyring-related changes, producing UML diagrams for system documentation, collaborating across 2–4 teams as a reviewer for cross-functional feature designs and system changes.

– **On-Call & Incident Response:** Served as the primary point of contact for all automation connection issues across teams. Led and resolved 10+ critical incidents, maintaining 99% uptime on connection health metrics and ensuring uninterrupted automation workflows.

– **Testing & Quality Assurance:** Developed unit, integration, and Ginkgo tests for the keyring service, achieving 85% code coverage and reducing production bugs by 20%. Refactored legacy code to enhance testability, cutting debugging time by 25%.

– **Enhanced logging & Observability:** Revamped the platform's logging infrastructure to centralize logs across all snap-ins, improving monitoring and debugging efficiency. Implemented cross-region log aggregation, reducing troubleshooting time by 25% in multi-region deployments, leading to faster issue resolution and improved system reliability.

– **Localization Framework:** Built a translation pipeline using the Lokalise API to automatically convert English UI and API messages into 5+ languages, reducing manual translation efforts and increasing global accessibility by 20%.

– **AirSync (Import/Export):** Led and mentored a team of 3–4 engineers building data sync connectors (TypeScript) for external platforms including Linear, Glean, Intercom, and Slack using in-house frameworks. Oversaw design, implementation, and delivery of bi-directional data pipelines, enabling seamless data import/export between third-party systems and DevRev at scale.

– **Marketplace Review Pipeline:** Designed and built the backend (Go) for the snap-in marketplace review and publishing workflow, enabling developers to submit snap-ins for review and seamlessly publish them to the DevRev marketplace upon approval.

• DevRev Cloud India Pvt Ltd

Jan 2023 - Aug 2023

Member of Technical Staff / Backend Engineer Intern

Onsite - Chennai, India

- **Developed a Command-Line Interface (CLI):** Designed, built, published, and launched a CLI (Go) for native snap-ins (automations), making it accessible to both internal teams and external developers. Extended the CLI with cross-region log fetching capability by implementing the required APIs. Simplified the snap-in/automation app installation and execution workflow, and streamlined distribution via npm for easy installation.
- **Automated Notification Snap-Ins:** Implemented automation snap-ins (TypeScript) for email reminders on subscription plan expiry and recharge options; built notifications for credit point approvals/rejections during trial periods, improving customer engagement.
- **Microservice Enhancement:** Improved APIs and resolved bugs across multiple services to enhance system performance and reliability; optimized backend services for faster response times and ensured seamless data flow between microservices.
- **On-Call & Customer Support Engineer:** Monitored service logs and system health, proactively identifying and resolving issues. Acted as the bridge between customers and engineering teams — understanding customer requirements, diagnosing and resolving bugs, providing solutions using existing capabilities, and routing complex issues to the right teams for timely resolution.

TECHNICAL SKILLS AND INTERESTS

Programming Languages: Golang, TypeScript, Python

Tools & Technologies: Git, GitHub, Docker, Kafka, Postman, Ginkgo, Lokalise

CI/CD & DevOps: CircleCI, GitHub Actions, Argo CD

Cloud Technologies: AWS (EC2, S3, SQS, Lambda)

Database: MongoDB

APIs & Protocols: REST, gRPC

IDEs & Editors: GoLand/IntelliJ IDEA, Cursor/Visual Studio Code

Interests: Scalable Back-end Development/Engineering

Soft Skills: Problem Solving, Self-Learning, Presentation, Adaptability, Flexibility
